Statement on Safe Sight tape:

“More than a year has gone by since I last gave my opinion on this visibility improver. That little, simple strip of tape still lives up to our high hopes. Despite so many trips through an automatic car wash, the tape stays on. We were able to use the wiper blades for more than two years before having to replace them. Note that the wiper blades were not new when the tape was affixed to the windscreen. Safe Sight tape should be prioritised by every driver who prefers good visibility in poor weather. I can't see any sensible reason for not installing this visibility improver.”
