Tank Heater

Information about our new patented product "tank heater" that can be used to all types and sizes of tanks such as tanks for hydraulic oil, biodiesel, toilets and water tanks, etc.

The heater, which has an electronic thermostat, is placed at the bottom of the tank.

This is connected to a control unit which is placed on top of the tank.

The heater is connected to the control unit by drilling holes in the top of the tank.

To complete installation simply connect a cable from the battery to the control unit.

For questions and quotation please contact the undersigned.
